

Blender Writeup

Ideation: I wanted to start off by practicing basic objects and understanding Blender tools. Video tutorials were immensely helpful to create a low-poly cupcake and character. After that, I wanted to challenge myself to create an animal from scratch, so I found a video teaching how to create any animal from a front and side view sketch and made a capybara.

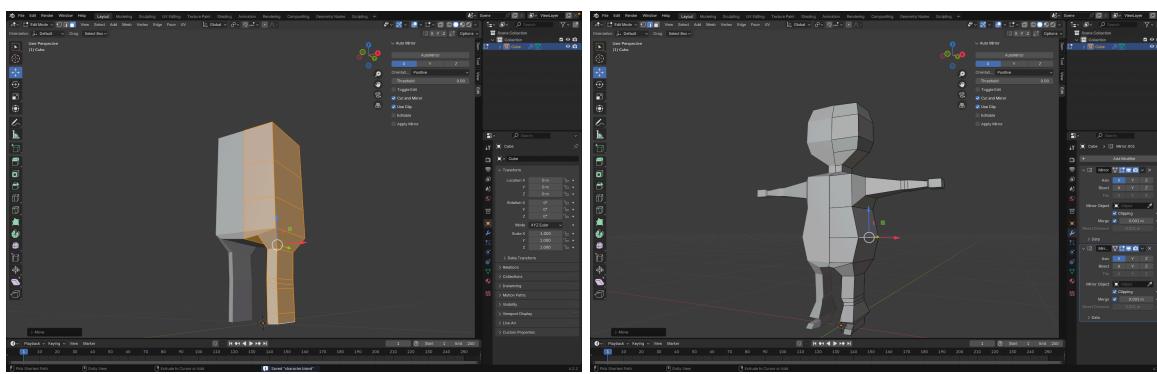

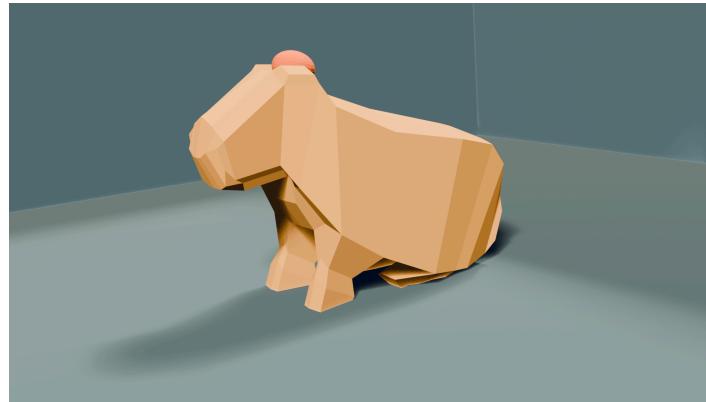

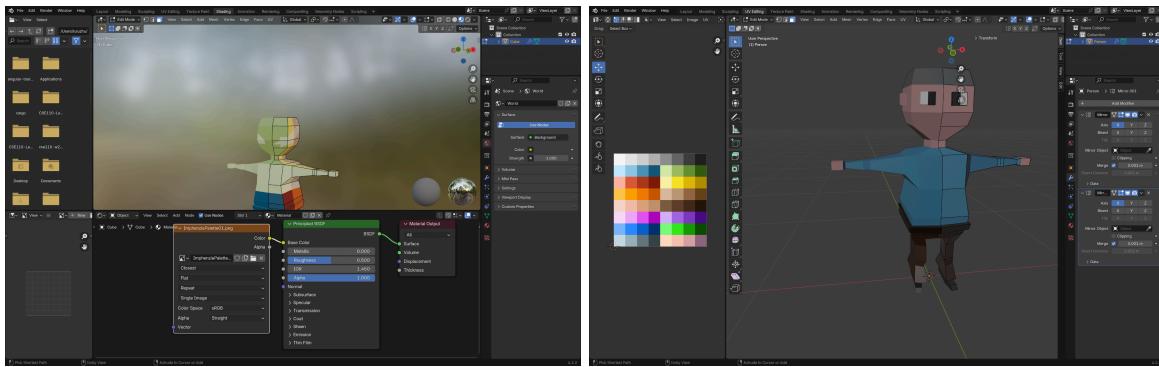

Object 1: Cupcake

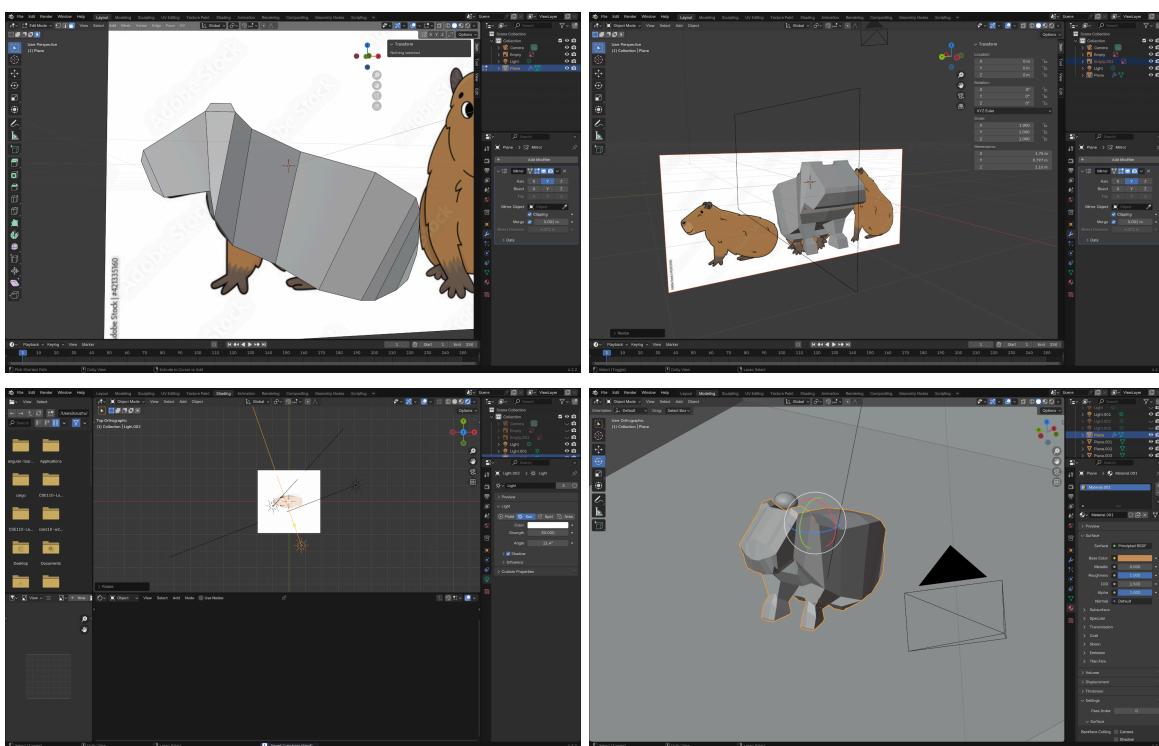

Object 2: Character

Object 3: Capybara

In order to learn new software while working with unfamiliar concepts—Blender in this case—I used resources such as video tutorials and forums to understand how to use the tools hands on. I then try to challenge myself to create something from my own knowledge to apply the knowledge I learned from the first 2 objects.
